

YOUR FIRST HYDRYALIX TREATMENT

BEFORE

- ✓ Set an appointment with a practitioner of your choice.
- ✓ Let the doctor know your wishes, expectations and medical history.
- ✓ Ask for his professional advice and decide together on the relevant treatment course.

DURING

- ✓ Before you begin you will be asked to remove any makeup or lipstick you might have on the treatment area. After disinfecting the area, the practitioner will use a pre-filled sterile Hydryalix syringe connected with a needle or a cannula and start the procedure.
- ✓ Hydryalix products contain Lidocaine for local anesthesia in order to minimize your discomfort during the treatment.
- ✓ The practitioner will massage the treated area and mold the material within the tissue in order to reach the best results.

AFTER

- ✓ Results can usually be seen immediately and will continue to improve and stabilize over the next 2-3 days as the Hyaluronic Acid does its work.
- ✓ You may have some local redness and swelling or bruising for a few days.
- ✓ Except compliments from people around you, such as "Did you cut your hair? You look amazing!"
- ✓ Several months after treatment natural degradation of the Hyaluronic Acid will take place.

HYDRYALIX

Luminera

Luminera

INJECTABLE BEAUTY

Luminera Derm is an R&D company as well as a manufacturer of injectable dermal fillers. The company operates under the highest regulatory standards in compliance with local and international directives. WHAT IS HYDRYALIX?

Our versatile line of Hyaluronic Acid dermal fillers provides a solution to wrinkles and skin degradation due to aging. It is composed of cross-linked hyaluronic acid from a non-animal source along with anesthetic material (lidocaine) for maximum comfort during treatment. Hydryalix line of products is designed to offer a full facial treatment of premium quality.

WHAT IS HYALURONIC ACID?

Hyaluronic acid is a natural sugar found in all living cells. One of its major body functions is to retain water and assist in transporting vital nutrients to the skin tissue. Approximately half of the amount of hyaluronic acid in the body is found in the skin and acts as a natural hydrating and volumizing agent.

TREATMENT AREAS

Forehead Lines

Frown Lines

Crow's Feet

Bridge of Nose

Cheek Bones

Nasolabial Folds

Lips

Jawline

Marionette Lines

Chin

Back of Hands

REVIVED YOUTHFULNESS & SKIN RADIANCE

In youthful skin, hyaluronic acid concentration is relatively high, providing moisture, smoothness and elasticity to the skin. As we age, hyaluronic acid synthesis naturally reduces and lower concentrations are found in the skin. As a result, skin tissue becomes less vital, wrinkles begin to appear and proper hydration is harder to maintain. Hyaluronic acid based products can easily help you restore your youthful smoothness and glow to the skin.

YOUNG SKIN

Our skin is smooth and full.

AGED SKIN

Our skin loses its elasticity and starts to sag.

YOUR FIRST HYDRYAL TREATMENT

BEFORE

- ✓ Set an appointment with a practitioner of your choice.
- ✓ Let the doctor know your wishes, expectations and medical history.
- ✓ Ask for his professional advice and decide together on the relevant treatment course.

DURING

- ✓ Before you begin you will be asked to remove any makeup or lipstick you might have on the treatment area. After disinfecting the area, the practitioner will use a pre-filled sterile Hydryal syringe connected with a needle or a cannula and start the procedure.
- ✓ Hydryal treatment is relatively superficial and should not cause much pain and discomfort.
- ✓ The practitioner will massage the treated area and mold the material within the tissue in order to reach the best results.

AFTER

- ✓ Results can usually be seen immediately and will continue to improve and stabilize over the next few days as the Hyaluronic Acid does its work.
- ✓ You may have some local redness and swelling or bruising for a few days.
- ✓ Except compliments from people around you, such as "Is that a new blouse? You look fabulous!"
- ✓ You may be recommended by your doctor to return for another treatment after a few weeks in order to complete a full treatment series and achieve the ultimate effect.
- ✓ Several months after treatment natural degradation of the Hyaluronic Acid will take place.
